

PROJECT IMPLEMENTATIONS

PROJECT METHODOLOGY

Any project Diamond Key International undertakes follows a strict set of project management criteria to make sure our customers receive exactly what is specified. Our project management process ensures the customer is kept informed throughout the configuration process and "signs off" as acceptable at "hold points" in the process

The "hold points" means our customer has the opportunity to thoroughly check the work so far. If acceptable, the customer is required to sign off the work so the project can progress to the following stage. It is not until the "sign off" is completed will the process proceed.

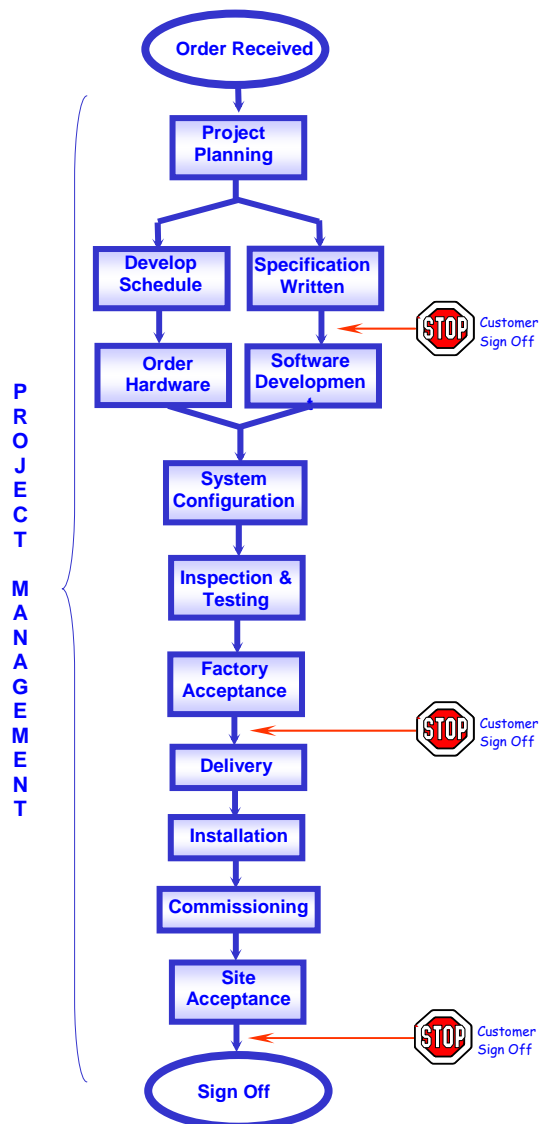

SAFETY

DKI take a responsible and proactive approach to workplace safety. All personnel will operate under correct safety procedures and with all necessary protective clothing / equipment. Any site that our personnel undertake work shall be safe and have all reasonable safety equipment available.

QUALITY

DKI is recognised for excellence in the provision of high quality products and services to the petrochemical industry. To facilitate this we operate a Quality System that complies with the requirements of the ISO9001 Standard.

Diamond Key International is also committed to the support of clients mission critical systems beyond the project completion stage.
